Synextra Senior Developer Test

http://api.open-notify.org/iss-now.json

The above JSON file exposes information about where the ISS currently is and is constantly being updated.

We want you to build a .NET Core service that consumes this JSON file and a web UI that consumes the .NET service to update the UI to display where the ISS is in real time.

API Spec:
- .NET Core 3.1
- Expose an endpoint for the UI to consume the ISS feed data

UI Spec:
- Any modern framework
- Display information from JSON file in anyway you see fit, either the raw data or on a map
- Bonus points for Typescript
